Optimized Inventory Analytics Application

Company Mission

"To make our customers more profitable by providing a standalone, intuitive, and dedicated inventory analytics solution to optimize their working capital investment"

What We Provide

Our Inventory analytics software provides insightful analysis to enable manufacturing companies to identify opportunities to reduce working capital and improve customer service.

Typical benefits include:

- Working Capital Reductions of between 10-25%
- Product Availability Improvements of 5-10%
- Reduced the Risk of product Obsolescence
- Reduced Operating costs due to reduced Warehousing Expenses

Software Features

Cloud Technology

Cloud technology with no system integration requirements means genuine rapid deployment (days rather than months)
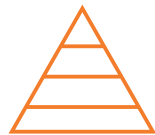

'What If' Inventory Modelling

Apply different mathematical algorithms to determine the true optimum level of inventory required versus current levels.

Inventory Cover Analysis

Understand how quickly your inventory is turning over and how efficient your company's cashflow is.

XYZ Segmentation

Classify your inventory in terms of uncertainty and ability to forecast demand accurately.

Triple Play Analysis

Unique Triple Play analysis creates a 'virtual' view of historical inventory performance that no other application in the market is able to provide.
