

BySoft Business Manufacturing

The manufacturing processes of the future are within everyone's reach.

Take control of your production with the most comprehensive and specialized solution for the sheet metal industry. Enjoy the benefits of a digital operating platform with all the functions needed for managing your sheet metal service.

Your benefits

- 01 **Streamlined manufacturing processes**
You will have access to your production planning whenever you like, being able to modify it according to your requirements at any given moment.
- 02 **Proactive decision-making**
Digitized process management enables conclusions to be reached regarding the state of production, helping to make decisions based on data.
- 03 **Improved production performance**
Receiving detailed information on your manufacturing status allows the management of bottle-necks and optimising schedules, improving your results.
- 04 **Production planning**
Constant control of plant operations.
- 05 **Integrate your management platform with other systems**
Connect your plant and your Bystronic machines to secure the data flow of your sheet metal cutting service.

Your features

Speed up the drafting of your roadmap and list of materials

The system has a materials structure on several levels that allows planning your workshop capacity without the need to change the environment.

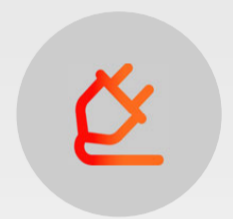

Calculate your expected costs

Estimate the materials and operations required for the manufacture of a specific project and calculate the costs instantly.

Get information about the time needed

Be informed of the real time used in the manufacture of a particular part.

Integrate all the operation steps

Obtain a comprehensive solution for sheet metal manufacturing.
